

## ISM3232C

### Lab 5: Generics and Enums (Part 1)

#### **Instructions**

After reading “Chapter 4: Leveraging Generics and Enums”, start with the section titled ‘Creating the project’ using the skeleton code for the base project and complete through the section titled ‘Implementing the removeMediaCollection method’. Be sure your code compiles cleanly.

There is no Canvas submission for this project, you will submit your work to a GitHub repository as described below.

#### **Submitting your work**

Once your project is complete, commit your code along with a screen ship showing the compile operation to the provided classroom repository. Your instructor will clone and grade your repo after the due date for this assignment.

There is no Canvas submission for this project.
